## **ECONOMETRIC MODELS with PANEL DATA** Cesar Perez Lopez

Data panels are a special type of samples in which the behavior of a certain number of economic agents is followed over time. In this way, the researcher can perform economic analysis and specify models with the data of cross section (or cross section) that are obtained when all operators are considered in an instant of time. Different patterns of behaviour of all players together studied in the different temporal moments may thus be assessed. Alternatively, you can perform the same analysis considering time series given by the evolution of each economic agent throughout all the periods of the sample. In the latter case could be considered different patterns for individual to individual behaviour all the time interval of the sample. The book focuses on practical aspects of econometrics of panel data presenting variety of solved exercise with the latest software. STATA, SAS, SPSS and EVIEWS software was used. The remarkable reads as follows:
