Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series)

Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series)

Item response theory (IRT) has moved beyond the confines of educational measurement into assessment domains such as personality, psychopathology, and patient-reported outcomes. Classic and emerging IRT methods and applications that are revolutionizing psychological measurement, particularly for health assessments used to demonstrate treatment effectiveness, are reviewed in this new volume. World renowned contributors present the latest research and methodologies about these models along with their applications and related challenges. Examples using real data, some from NIH-PROMIS, show how to apply these models in actual research situations. Chapters review fundamental issues of IRT, modern estimation methods, testing assumptions, evaluating fit, item banking, scoring in multidimensional models, and advanced IRT methods. New multidimensional models are provided along with suggestions for deciding among the family of IRT models available. Each chapter provides an introduction, describes state-of-the art research methods, demonstrates an application, and provides a summary. The book addresses the most critical IRT conceptual and statistical issues confronting researchers and advanced students in psychology, education, and medicine today. Although the chapters highlight health outcomes data the issues addressed are relevant to any content domain.

The book addresses:

IRT models applied to non-educational data especially patient reported outcomes

Differences between cognitive and non-cognitive constructs and the challenges these bring to modeling.?

The application of multidimensional IRT models designed to capture typical performance data.?

Cutting-edge methods for deriving a single latent dimension from multidimensional data

A new model designed for the measurement of constructs that are defined on one end of a continuum such as

substance abuse

Scoring individuals under different multidimensional IRT models and item banking for patient-reported health outcomes

How to evaluate measurement invariance, diagnose problems with response categories, and assess growth and change.?

Part 1 reviews fundamental topics such as assumption testing, parameter estimation, and the assessment of model and person fit. New, emerging, and classic IRT models including modeling multidimensional data and the use of new IRT models in typical performance measurement contexts are examined in Part 2. Part 3 reviews the major applications of IRT models such as scoring, item banking for patient-reported health outcomes, evaluating measurement invariance, linking scales to a common metric, and measuring growth and change. The book concludes with a look at future IRT applications in health outcomes measurement. The book summarizes the latest advances and critiques foundational topics such as multidimensionality, assessment of fit, handling non-normality, as well as applied topics such as differential item functioning and multidimensional linking.?

Intended for researchers, advanced students, and practitioners in psychology, education, and medicine interested in applying IRT methods, this book also serves as a text in advanced graduate courses on IRT or measurement. Familiarity with factor analysis, latent variables, IRT, and basic measurement theory is assumed.?

From reader reviews:

John Valdez:

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite publication and reading a reserve. Beside you can solve your short lived problem; you can add your knowledge by the guide entitled Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series). Try to face the book Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series) as your close friend. It means that it can for being your friend when you feel alone and beside associated with course make you smarter than previously. Yeah, it is very fortunated to suit your needs. The book makes you much more confidence because you can know anything by the book. So , let us make new experience along with knowledge with this book.

Clara Palmer:

What do you think about book? It is just for students since they are still students or the item for all people in the world, what the best subject for that? Simply you can be answered for that question above. Every person has several personality and hobby for each other. Don't to be pushed someone or something that they don't wish do that. You must know how great and important the book Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series). All type of book is it possible to see on many methods. You can look for the internet options or other social media.

Robert Auclair:

Information is provisions for folks to get better life, information nowadays can get by anyone on everywhere. The information can be a understanding or any news even restricted. What people must be consider when those information which is inside the former life are challenging to be find than now is taking seriously which one is acceptable to believe or which one the resource are convinced. If you get the unstable resource then you have it as your main information there will be huge disadvantage for you. All of those possibilities will not happen throughout you if you take Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series) as your daily resource information.

Eric Rodriguez:

Reading a e-book make you to get more knowledge as a result. You can take knowledge and information coming from a book. Book is composed or printed or outlined from each source that will filled update of news. In this modern era like today, many ways to get information are available for anyone. From media social including newspaper, magazines, science reserve, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Do you want to spend your spare time to open your book? Or just trying to find the Handbook of Item Response Theory Modeling: Applications to Typical Performance Assessment (Multivariate Applications Series) when you needed it?
