## **Advances in microbial food safety: 1. Interview with a food safety expert: Dr R. Bruce Tompkin (Woodhead Publishing Series in Food Science, Technology and Nutrition)** R.B. Tompkin, J. Sofos

This chapter is a series of questions and answers between John Sofos and Bruce Tompkin, giving Bruce's perspective as a food microbiologist on food safety. Progress depends on epidemiologic studies by public health agencies and research by universities and government laboratories. Industry responded to microbial hazards and food-pathogen combinations with good manufacturing practices (GMPs) and hazard analysis and critical control point (HACCP) systems. Examples demonstrate improved consumer protection. Success depends on control measures, regulatory approval and consumer acceptance. Existing weaknesses and the underlying reasons are described. The challenge for the food safety community will be to find acceptable solutions and achieve the higher level of protection that consumers expect.
