Active and Programmable Networks for Adaptive Architectures and Services

Syed Asad Hussain

Active and Programmable Networks for Adaptive Architectures and Services Syed Asad Hussain

Most conventional networks are passive, with only basic traffic monitoring, management, routing, and congestion control. At best, they can be called reactive. Deploying new functions and integrating new standards into these architectures is difficult due to the rigid embedding of software and hardware into the network components. *Active and Programmable Networks for Adaptive Architectures and Services* introduces a new generation of network technologies and architecture that allows the creation, customization, and management of new services and applications deployed dynamically into network nodes.

Following a brief introduction and historical overview, the author outlines the architecture of active and programmable networks, discusses the enabling technologies for network programmability in detail, and introduces several paradigms and prototypes. He then explores packet scheduling, management, routing, and security and examines active wireless and mobile networks. The final chapter presents several real-world examples of currently deployed active and programmable networks. Several tables present information on different schemes and architectures, allowing easy comparison among a range of networking options.

Placing the new paradigm in contrast with concepts such as TCP/IP and OSI, *Active and Programmable Networks for Adaptive Architectures and Services* makes it easy to see how these new technologies can help you build more flexible and adaptive networks that can seamlessly integrate new functions.

From reader reviews:

Carmine Adams:

Have you spare time for any day? What do you do when you have much more or little spare time? That's why, you can choose the suitable activity to get spend your time. Any person spent their spare time to take a go walking, shopping, or went to the actual Mall. How about open as well as read a book called Active and Programmable Networks for Adaptive Architectures and Services? Maybe it is for being best activity for you. You recognize beside you can spend your time along with your favorite's book, you can wiser than before. Do you agree with their opinion or you have various other opinion?

Florence Whitney:

What do you about book? It is not important with you? Or just adding material when you want something to explain what your own problem? How about your time? Or are you busy person? If you don't have spare time to perform others business, it is make you feel bored faster. And you have spare time? What did you do? All people has many questions above. The doctor has to answer that question since just their can do that will. It said that about guide. Book is familiar in each person. Yes, it is right. Because start from on kindergarten until university need this Active and Programmable Networks for Adaptive Architectures and Services to read.

Sun Byrd:

Is it an individual who having spare time subsequently spend it whole day by means of watching television programs or just lying down on the bed? Do you need something new? This Active and Programmable Networks for Adaptive Architectures and Services can be the respond to, oh how comes? It's a book you know. You are and so out of date, spending your time by reading in this new era is common not a geek activity. So what these guides have than the others?

Kathleen Bosarge:

A number of people said that they feel fed up when they reading a reserve. They are directly felt that when they get a half elements of the book. You can choose typically the book Active and Programmable Networks for Adaptive Architectures and Services to make your own personal reading is interesting. Your own skill of reading ability is developing when you such as reading. Try to choose easy book to make you enjoy you just read it and mingle the feeling about book and looking at especially. It is to be first opinion for you to like to open up a book and study it. Beside that the book Active and Programmable Networks for Adaptive Architectures and Services can to be your brand-new friend when you're experience alone and confuse in what must you're doing of the time.
