Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications

Haitham Abu-Rub, Mariusz Malinowski, Kamal Al-Haddad

Compiles current research into the analysis and design of power electronic converters for industrial applications and renewable energy systems, presenting modern and future applications of power electronics systems in the field of electrical vehicles

With emphasis on the importance and long-term viability of Power Electronics for Renewable Energy this book brings together the state of the art knowledge and cutting-edge techniques in various stages of research. The topics included are not currently available for practicing professionals and aim to enable the reader to directly apply the knowledge gained to their designs. The book addresses the practical issues of current and future electric and plug-in hybrid electric vehicles (PHEVs), and focuses primarily on power electronics and motor drives based solutions for electric vehicle (EV) technologies. Propulsion system requirements and motor sizing for EVs is discussed, along with practical system sizing examples. Key EV battery technologies are explained as well as corresponding battery management issues. PHEV power system architectures and advanced power electronics intensive charging infrastructures for EVs and PHEVs are detailed. EV/PHEV interface with renewable energy is described, with practical examples. This book explores new topics for further research needed world-wide, and defines existing challenges, concerns, and selected problems that comply with international trends, standards, and programs for electric power conversion, distribution, and sustainable energy development. It will lead to the advancement of the current state-of-the art applications of power electronics for renewable energy, transportation, and industrial applications and will help add experience in the various industries and academia about the energy conversion technology and distributed energy sources.

- Combines state of the art global expertise to present the latest research on power electronics and its application in transportation, renewable energy and different industrial applications
- Offers an overview of existing technology and future trends, with discussion and analysis of different types of converters and control techniques (power converters, high performance power devices, power system, high performance control system and novel applications)
- Systematic explanation to provide researchers with enough background and understanding to go deeper in the topics covered in the book

From reader reviews:

Marlon Hood:

Playing with family in the park, coming to see the sea world or hanging out with close friends is thing that usually you may have done when you have spare time, after that why you don't try matter that really opposite from that. Just one activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition associated with. Even you love Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications, you can enjoy both. It is great combination right, you still need to miss it? What kind of hang-out type is it? Oh occur its mind hangout men. What? Still don't have it, oh come on its known as reading friends.

Michael Greene:

In this particular era which is the greater man or who has ability in doing something more are more important than other. Do you want to become one among it? It is just simple strategy to have that. What you need to do is just spending your time very little but quite enough to experience a look at some books. On the list of books in the top collection in your reading list will be Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications. This book which is qualified as The Hungry Inclines can get you closer in turning into precious person. By looking upwards and review this publication you can get many advantages.

Randy Gable:

Guide is one of source of information. We can add our expertise from it. Not only for students but also native or citizen want book to know the upgrade information of year for you to year. As we know those ebooks have many advantages. Beside we all add our knowledge, could also bring us to around the world. From the book Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications we can get more advantage. Don't you to be creative people? To become creative person must want to read a book. Just choose the best book that acceptable with your aim. Don't possibly be doubt to change your life by this book Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications. You can more attractive than now.

Michelle Mills:

A lot of people said that they feel uninterested when they reading a guide. They are directly felt the idea when they get a half regions of the book. You can choose often the book Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications to make your reading is interesting. Your skill of reading talent is developing when you similar to reading. Try to choose easy book to make you enjoy to read it and mingle the opinion about book and examining especially. It is to be 1st opinion for you to like to open a book and examine it. Beside that the book Power Electronics for Renewable Energy Systems, Transportation and Industrial Applications can to be your brand-new friend when you're experience alone

and confuse using what must you're doing of their time.
