## Cellular Analogues of Conditioning and Neural Plasticity: Satellite Symposium of the 28th International Congress of Physiological Sciences Szeged, Hungary, 1980

Advances in Physiological Sciences, Volume 36: Cellular Analogues of Conditioning and Neural Plasticity is a collection of paper that details the various aspects of neural plasticity from various methodological perspectives. The title covers the physiological-morphological and biochemical methods in studying neural plasticity.

The coverage of the text includes topics such as neuroplasticity in the superior cervical ganglion as a consequence of long-lasting inhibition; evidence for remodeling of synaptic contacts in muscles of adult frog; and calcium and presynaptic factors in synaptic plasticity. The selection also covers the regulation of acetylcholine receptors; molecular mechanisms of sensitization and desensitization of  $\beta$ -receptors connected with adenylate cyclase; and cellular and behavioral studies of learning and memory in simpler systems. The book will be of great use to neurologists, neurosurgeons, and behavioral scientists.
