Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics) Masanori Ohya, I. Volovich

This monograph provides a mathematical foundation to the theory of quantum information and computation, with applications to various open systems including nano and bio systems.

It includes introductory material on algorithm, functional analysis, probability theory, information theory, quantum mechanics and quantum field theory. Apart from standard material on quantum information like quantum algorithm and teleportation, the authors discuss findings on the theory of entropy in C^* -dynamical systems, space-time dependence of quantum entangled states, entangling operators, adaptive dynamics, relativistic quantum information, and a new paradigm for quantum computation beyond the usual quantum Turing machine. Also, some important applications of information theory to genetics and life sciences, as well as recent experimental and theoretical discoveries in quantum photosynthesis are described.

From reader reviews:

Deana Broom:

People live in this new moment of lifestyle always aim to and must have the time or they will get great deal of stress from both day to day life and work. So , if we ask do people have spare time, we will say absolutely yes. People is human not really a huge robot. Then we ask again, what kind of activity do you possess when the spare time coming to a person of course your answer can unlimited right. Then do you try this one, reading textbooks. It can be your alternative inside spending your spare time, the actual book you have read is Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics).

James Ames:

Do you really one of the book lovers? If yes, do you ever feeling doubt when you are in the book store? Try and pick one book that you never know the inside because don't judge book by its handle may doesn't work this is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside appearance likes. Maybe you answer is usually Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics) why because the wonderful cover that make you consider with regards to the content will not disappoint anyone. The inside or content is usually fantastic as the outside or even cover. Your reading 6th sense will directly assist you to pick up this book.

Chad Steinberger:

Do you like reading a e-book? Confuse to looking for your best book? Or your book ended up being rare? Why so many concern for the book? But just about any people feel that they enjoy for reading. Some people likes examining, not only science book but novel and Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics) as well as others sources were given expertise for you. After you know how the truly great a book, you feel need to read more and more. Science e-book was created for teacher as well as students especially. Those textbooks are helping them to put their knowledge. In some other case, beside science e-book, any other book likes Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics) to make your spare time considerably more colorful. Many types of book like here.

Margie Rodriguez:

Guide is one of source of information. We can add our knowledge from it. Not only for students but also native or citizen want book to know the update information of year for you to year. As we know those books have many advantages. Beside most of us add our knowledge, could also bring us to around the world. By

book Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics) we can acquire more advantage. Don't you to definitely be creative people? Being creative person must want to read a book. Simply choose the best book that suited with your aim. Don't end up being doubt to change your life by this book Mathematical Foundations of Quantum Information and Computation and Its Applications to Nano- and Bio-systems (Theoretical and Mathematical Physics). You can more pleasing than now.
