Market Integration Through Data Protection: An Analysis of the Insurance and Financial Industries in the EU (Law, Governance and Technology Series) Mario Viola de Azevedo Cunha

In the context of the continuous advance of information technologies and biomedicine, and of the creation of economic blocs, this work analyzes the role that data protection plays in the integration of markets. It puts special emphasis on financial and insurance services. Further, it identifies the differences in the data protection systems of EU member states and examines the development of common standards and principles of data protection that could help build a data protection model for Mercosur. Divided into four parts, the book starts out with a discussion of the evolution of the right to privacy, focusing on the last few decades, and taking into account the development of new technologies. The second part discusses the interaction between data protection and specific industries that serve as case studies: insurance, banking and credit reporting. The focus of this part is on generalization and discrimination, adverse selection and the processing of sensitive and genetic data. The third part of the book presents an analysis of the legislation of three EU Member States (France, Italy and UK). Specific elements of analysis that are compared are the concepts of personal and anonymous data, data protection principles, the role of the data protection authorities, the role of the data protection officer, data subjects' rights, the processing of sensitive data, the processing of genetic data and the experience of the case studies in processing data. The book concludes with the proposal of a model for data protection that could be adopted by Mercosur, taking into account the different levels of data protection that exist in its member states.
